

TECH NOTE FOR KAYPRO USERS:

IF YOU HAVE PROBLEMS READING YOUR CO-POWER LOAD FILES DISKETTE:

All SWP software is distributed on single-sided disks. Kaypro computers with double-sided drives sometimes have problems reading single-sided disks. There are a couple of ways to get the computer to read the single-sided disk:

1. Run Uniform or MFDISK and tell the computer that one of the floppy drives is a single-sided Kaypro format. Use this drive to read our disk and to copy the files to another disk.
2. A. Use SSCOPY and make yourself a single-sided CP/M disk on Drive B (Drive C for Kaypro 10 users).
B. Boot with a CP/M disk that has PIP.COM and has room for the SWP files.
C. Put the disk made with SSCOPY in Drive B and log onto it (Drive C for Kaypro 10s). Once this disk is recognized, you can remove it and insert the SWP distribution disk. You should now be able to read the directory and to copy the files to another disk.
